Nothing about us without us is for us.

The people of New Orleans will not go quietly into the night becoming the homeless of countless other cities while our own homes are raided to make way for mansions, condos, and casinos. We will join together to defend our claim and we will rebuild our home in the image of our own dreams!

The Peoples Hurricane Relief Fund and Oversight Coalition

sustainable landscapes

Grass pavers are square-shaped. Its structure provides incredible load-bearing strength while protecting vegetation root systems from deadly compaction. High void spaces within the entire cross-section enable excellent root development, and storage capacity for rainfall from storm events. Stormwater is slowed in movement through and across its surfaces, which deposits suspended sediment and increases time to discharge. Suspended pollutants and moderate amounts of engine oils are consumed by active soil bacteria, which are aided by the system's excellent oxygen exchange capacity.

Centipedegrass

This plant has one of the lowest maintenance requirements of warm season grasses, having extended periods between mowing cycles. It thrives in sandy, acidic soils in the southern United States. It is able to withstand hard freezes, regrowing and repairing itself shortly after the weather warms. When it is healthy, the grass is able to withstand intrusion by other grasses and weeds.

Live oak tree

This oak tolerates soil ranging from light sand to heavy, compact silt and clay. A wide range of moisture conditions, salt spray, it requires a large area for branches and roots to spread. It is a shade tree that can be used on large properties or as a street tree. It has a long life and requires little maintenance and has few pests. It is able to withstand floods, hurricanes, and fire.

Turflock

These open grid concrete pavers provide an environmentally sound alternative to solid pavers, allowing water to percolate to tree and grass roots. They are ideal for soil retention on river and pond banks, and for 'natural' landscaping found in wooded residential and commercial developments. They are durable as well, with a high tensile strength design. It provides an excellent solution to parking problems without pouring a slab or laying asphalt. The pavers also help prevent erosion.
Sustainable Landscapes

Porous Asphalt Course

1/2 to 3/4 aggregate
Asphaltic mix (60:40)

Filter Course

2 to 3 courses stone 1/4" - 1" thick

Reservoir Course

2 to 3 courses stone 2" - 3" thick

Volume is designed for runoff detention

Existing soil

Minimal compaction to retain porosity and permeability

Additional Information

Nutrients needed for healthy soil: phosphorous, nitrogen, calcium, magnesium

To improve drainage in soil, add sand and humus; to improve water retention, add clay and humus

Sunflowers have been scientifically designed to remove up to 99% of contaminants in a 24 hour period. This technique has been used around Chernobyl, Ukraine. It has edible seeds as well as produces a cooking oil, and a paint additive.

Lemon-scented geraniums have a unique ability to be able to remove heavy metals and organic pollutants out of the soil. In a process researchers call 'phytoextraction,' the geraniums can absorb industrial pollutants like cadmium, lead, nickel, and copper.
Green Roofs

**General Information**

- Retain rainwater, up to 90% percent.
- Can reduce temperature of roofing membrane up to 40 degrees Fahrenheit.
- Cool surrounding air, reducing "urban heat island" effect.
- Provides substantial noise insulation.
- Provides additional land area, allowing for more biological diversity.
- Can absorb toxins and respiration oxygen into the air.

**Green Roof Projects**
Cisterns

tank or storage (usually underground) for storing collected water

Three main components

- actual barrel - plastic or metal
- sealed yet removable, child-resistant lid
- connections to downspout, runoff pipe, and/or spigot

Bush on Video: “We are fully prepared” Officials voiced grave concerns about levees. White House downplays briefing Times-Picayune headline, 26th February 2006

Objective: Provide city-wide capacity building program that enables individuals and/or small arts & culture organizations to formulate strategies and develop capacity for growth

“If they decide to rebuild New Orleans...” I will explode.

New Orleans was a great city long before there was even an idea about forming the United States. I know of course that they will rebuild the city. It will never be the same.

It will take a great amount of time, money, effort, and patience.

The federal government had been warned repeatedly for 20 years that that specific levee was in dire need of attention, yet nobody listened.

I believe these politicians were criminally negligent and are partly to blame for much of this. And perhaps now the country will start taking seriously the problems caused by coastal erosion. I hope.

In order to install a temporary roof under the Blue Roof Program, buildings must:
- Have 50% or less of the roof decking damaged
- Have 50% or less of the supporting structure damaged
- Be Structurally Sound & Safely Accessed

Michael Reiter, New Orleans

If it takes something as big as Hurricane Katrina and the misery we saw among the poor black people of New Orleans to get America to focus on race and poverty it happens about once every 30 or 40 years.
HIGH GROUND FOR WHOM

"Katrina" must not come to stand for a de facto slum clearance in which populations as well as buildings perceived as damaged were removed. It must represent the moment of reckoning with long standing and pernicious social inequity. Every development opportunity, especially this one, must viscerally connect the fragile yet vital fabric of people as well as places. Any redevelopment is responsible to New Orleans in its entirety.

American Eclectic

Can security be defined for a single house or even precinct? What is the role of high ground in the face of disaster? Must not high ground be available to the city at large for rescue and for larger scenarios of refuge even in the case of private development?
NEW ORLEANS

NOTHING ABOUT US
WITHOUT US
IS FOR US

THE PEOPLE OF NEW ORLEANS WILL NOT GO QUIETLY INTO THE NIGHT BECOMING THE HOMELESS OF COUNTLESS OTHER CITIES WHILE OUR OWN HOMES ARE RAIDED TO MAKE WAY FOR MANSIONS, CONDOS, AND CASINOS. WE WILL JOIN TOGETHER TO DEFEND OUR CLAIM AND WE WILL REBUILD OUR HOME IN THE IMAGE OF OUR OWN DREAMS!

THE PEOPLES HURRICANE RELIEF FUND AND OVERSIGHT COALITION
New Orleans Redux

2006 Summer Seminar May 15-June 25
with study travel to follow the
Architecture 565P/ sec 01
professor Deborah Gans
professor Ron Shiffman
Tuesday/Thursday 5:00-8:00

These coordinated seminars will first research the hydrology, ecology, site and landscape conditions of New Orleans East, a low-lying suburban area along Lake Ponchartrain, and then suggest strategies for flood remediation and future land use at the scale of the settlement pattern, the block and the yard. We will propose a prototypical block concept and roll it into new Green New Deal following the principles of the New Urbanism.

Architecture will focus on the physical design while the planning seminar will focus on corresponding policy at the level of the community, city, and region.
