

U.S Department of Housing and Urban Development

The Administration's goal remains to stabilize the housing market and provide security for homeowners. To meet these objectives in a challenging market, the Administration developed a broad approach implementing state and local housing agency initiatives, tax credits for homebuyers, neighborhood stabilization and community development programs, mortgage modifications and refinancing, housing counseling, continued Federal Housing Administration (FHA) engagement, support for Fannie Mae and Freddie Mac, and increased consumer protections. In addition, Federal Reserve and Treasury Mortgage-Backed Securities purchase programs have helped to keep mortgage interest rates at record lows. More detail on the Administration's efforts can be found in the Appendix.

- Sales of previously owned (existing) homes climbed to the highest pace in more than nine years in May. The National Association of Realtors® (NAR) reported that sales of existing homes (including single-family homes, townhomes, condominiums, and cooperatives) rose 1.8 percent in May to 5.53 million (SAAR)—and are at their fastest pace since February 2007 (5.79 million). Sales were 4.5 percent higher than a year earlier. All Census Regions except the Midwest saw an increase in sales. Existing home sales have been above the 5.0 million mark for 14 of the past 15 months.
- Homeowners' equity continues to show sharp gains. Homeowners' equity (total property value less mortgage debt outstanding) was up \$461 billion (3.7%) from the fourth quarter of 2015, for a total of more than \$13.0 trillion—the highest level since the first quarter of 2006—when it peaked at nearly \$13.3 trillion. The increase in owners' equity was \$371 billion in the fourth quarter. The change in equity since April 1, 2009, when the Administration initiated its broad set of actions to stabilize the housing market, now stands at nearly \$6.8 trillion (+108%) and equity has grown by more than \$6.5 trillion since the end of 2011. (Source: Federal Reserve.)
- The number of homeowners in negative equity declined. As of the first quarter of 2016, CoreLogic estimated that 4.0 million homes, or 8.0 percent of residential properties with a mortgage, were in negative equity. This compares to 4.3 million, or 8.5 percent, that were reported in negative equity in the fourth quarter of 2015 and 5.1 million, or 10.2 percent one year ago. From the beginning of 2012 through the first quarter of 2016, the number of underwater borrowers (those who owe more on

their mortgage than the value of their home) has declined by 67 percent from 12.1 million to 4.0 million—or by 8.1 million homeowners. (Source: CoreLogic.)

- Mortgage rates hit another three-year low in June. The average rate for a 30-year fixed rate mortgage was 3.48 percent for the week ending June 30, 2016, down from 3.97 percent at the start of the year and the lowest level since May 9, 2013 (3.42 percent). The average weekly 30-year fixed rate is now only 17 basis points above the lowest recorded rate of 3.31 percent in November 2012. (Source: Freddie Mac; historical data since 1971.)
- Purchases of new homes fell in May. New single-family home sales declined 6.0 percent in May to 551,000 (SAAR) from a downwardly revised rate of 586,000 in April. New home purchases were 8.7 percent higher than a year earlier, however, and the April pace was still the highest in eight years. Monthly data on new home sales can be volatile and are often revised. (Source: HUD and Census Bureau.)
- The Administration's foreclosure mitigation programs continue to provide relief for millions of homeowners as the recovery from the housing crisis continues. In all, more than 10.5 million mortgage modifications and other forms of mortgage assistance arrangements were completed between April 2009 and the end of May 2016. More than 2.6 million homeowner assistance actions have taken place through the Making Home Affordable Program, including over 1.6 million permanent modifications through the Home Affordable Modification Program (HAMP), while the Federal Housing Administration (FHA) has offered more than 3.2 million loss mitigation and early delinquency interventions through May. These Administration programs continue to encourage improved standards and processes in the industry, with lenders offering families and individuals more than 4.7 million proprietary modifications through April (proprietary data are reported with a 2-month lag). You can read the Treasury's MHA report <u>here</u>.

Encouraging news notwithstanding, there is a need to continue with recovery efforts to foster home sales, help those homeowners that remain underwater, and reduce mortgage delinquency rates that remain elevated. There is also considerable geographic variation in market conditions not captured in the national statistics, which suggests some markets are improving at different rates than others.

### SOURCES AND METHODOLOGY

### B. Notes on Charts.

- 1. Monthly house price trends shown as changes in respective house price indices applied to a common base price set equal to the median price of an existing home sold in January 2003 as reported by the National Association of Realtors. Indices shown: S&P/Case Shiller 20-metro composite index (NSA), January 2000 = 100, FHFA monthly (purchase-only) index for US (SA), January 1991 = 100, and CoreLogic-Distressed Sales Excluded (Monthly) for US (NSA), January 2000 = 100. Also see additional note below in Section C on the CoreLogic HPI.
- S&P/Case-Shiller 10-metro composite index (NSA) as reported monthly. Implied Case-Shiller futures index figures report forward expectations for the level
  of the S&P/Case Shiller index as of the date indicated, estimated from prices of futures purchased on the Chicago Mercantile Exchange reported by CME
  Group. The January 2009 market trend projection reports forward expectations estimated from prices of futures contracts reported by Radar Logic. Also see
  additional note in Section C below.
- 3. Reported seasonally adjusted annual rates for new and existing home sales divided by 12.
- 4. HUD estimate of refinance originations based on MBA estimate of dollar volume of refinance originations.
- 5. Cumulative HAMP permanent modifications started, FHA loss mitigation and early delinquency interventions, plus proprietary modifications completed as reported by HOPE Now Alliance. Some homeowners may be counted in more than one category. Foreclosure completions are properties entering Real Estate Owned (REO) as reported by Realty Trac. Also see additional note in Section C below on HAMP Tier 2.
- 6. Beginning with the September 2012 release, filings of a notice of default or scheduled foreclosure auction, depending on which action starts the foreclosure process in a state, are reported for foreclosure starts. Foreclosure defaults previously had been reported as a proxy for foreclosure starts. Foreclosure completions are properties entering REO. Both as reported by Realty Trac.
- 7. Streamlined refinances are designed to lower the monthly principal and interest payments on a mortgage. The refinances are referred to as "streamlined" because they involve less paperwork, reducing the time it takes to process the loan. The agency permitting the streamline refinance already bears the credit risk on the original loan and does not require full underwriting (enabling homeowners whose current loans may be underwater to qualify). For information on FHA streamline refinances, see: http://portal.hud.gov/hudportal/documents/huddoc?id=4155-1\_6\_secC.pdf . For information on HARP refinances, see: http://www.harp.gov/about .
- 8. FHA market shares as FHA purchase and refinance originations divided by HUD estimates of purchase and refinance mortgage originations as noted in "Mortgage Originations" above. See additional note below on FHA market share.

#### C. Additional Notes.

Beginning with the February 2013 release, the House Price Expectations Chart was updated by replacing market expectations as they existed in January 2009 with expectations as of December 2011. Prices of futures purchased for the S&P/Case-Shiller 10-metro composite index, available on the web from CME Group, were used to estimate expectations for December 2011 and for the current month. Market trend as of January 2009 is estimated from percentage changes in house price futures based on a different house price index: RadarLogic RPX. This trend has been added back to the chart because it imparts important information on how house price expectations have changed over time.

Beginning with the January 2013 release, mortgage aid under HAMP Tier 2 is included in the totals. Effective June 2012, HAMP Tier 2 expanded eligibility requirements to further reduce foreclosures and help stabilize neighborhoods. For non-GSE loans, eligibility was expanded to allow for more flexible debt-to-income criteria and to include properties currently occupied by a tenant, as well as vacant properties which a borrower intends to rent.

FHA market share estimates are based on new methodology beginning with the October 2013 report; estimates were revised back through Q1 2013. See the FHA Market Share report on their website for an explanation of the new methodology: http://portal.hud.gov/hudportal/HUD?src=/program\_offices/housing/rmra/oe/rpts/fhamktsh/fhamktgtrly.

The Q1 2016 NSP projection counts were revised for demolition or clearance and direct homeownership assistance.

The estimate for first-time buyers was revised downward from 38 percent to 33 percent beginning with the November 2014 release based on the NAR Profile of Home Buyers and Sellers 2014.

CoreLogic's House Price Index (HPI) estimates are based on new methodology beginning with their June 2016 report, which includes data through April 2016. A variety of modeling and other enhancements to their HPI and its forecast, including a 14 percent expansion in the number of transaction pairs, were made.

# Appendix

The Administration has taken a broad set of actions to stabilize the housing market and help American homeowners. Three years ago, stress in the financial system had severely reduced the supply of mortgage credit, limiting the ability of Americans to buy homes or refinance mortgages. Millions of responsible families who had made their monthly payments and had fulfilled their obligations saw their property values fall. They also found themselves unable to refinance at lower mortgage rates.

In February 2009, less than one month after taking office, President Obama announced the Homeowner Affordability and Stability Plan. As part of this plan and through other housing initiatives, the Administration has taken the following actions to strengthen the housing market:

- Supported Fannie Mae and Freddie Mac to ensure continued access to affordable mortgage credit;
- The Federal Reserve and the U.S. Treasury purchased more than \$1.4 trillion in agency mortgage backed securities through independent MBS purchase programs, helping to keep mortgage rates at historic lows;
- Launched a modification initiative to help homeowners reduce mortgage payments to affordable levels and to prevent avoidable foreclosures;
- Launched a \$23.5 billion Housing Finance Agencies Initiative to increase sustainable homeownership and rental resources;
- Supported the First Time Homebuyer Tax Credit, which helped more than 2.5 million American families purchase homes;
- Provided more than \$5 billion in support for affordable rental housing through low income housing tax credit programs and \$6.92 billion in support for the Neighborhood Stabilization Program to restore neighborhoods hardest hit by the concentrated foreclosures;
- Created the \$7.6 billion HFA Hardest Hit Fund for innovative foreclosure prevention programs in the nation's hardest hit housing markets;
- Launched the \$1 billion Emergency Homeowners Loan Program, as part of the Dodd-Frank Wall Street Reform and Consumer Protection Act, to help unemployed and underemployed homeowners pay a portion of their monthly mortgage.
- Created an FHA Short Refinance Option that helps underwater borrowers refinance into a new, stable, FHA-insured mortgage that is more aligned with actual property values.
- Supported home purchase and refinance activity through the FHA to provide access to affordable mortgage capital and help homeowners prevent foreclosures.
- Implemented a series of changes to the Home Affordable Refinance Program (HARP) in an effort to attract more eligible borrowers who can benefit from refinancing their home mortgages during this time of historically low mortgage rates.

###
